## **GATES® POWERGRIP™ GT4™**

The new Gates® PowerGrip™ GT4™ line of products provides significant advantages vs. the previous GT3™ generation and can be utilized as a drop-in replacement under all circumstances (except as noted below) for our existing GT3 customers/applications.

- PowerGrip™ GT4™ belts have been designed with the same tooth pitch/profile and length x width combinations
- PowerGrip™ GT4™ belts are static conductive in accordance with ISO 9563
- PowerGrip™ GT4™ has been proven to have improved power capacity capabilities vs. GT3™ at all conditions throughout our exhaustive testing process.
- Important Note : PowerGrip™ GT3™/GT4™ is not meant to perform and is not the proper solution in fully submerged oil/grease applications. Please contact your Gates sales and/or application engineering representative for an appropriate solution in this type of application.
